

## Project: RUET v20.0

### Objective:

RUET v20.0 is a common website application for Teacher, Students and Alumni of RUET. This unique website is focused on Student productivity. As Engineers, we spend most of our time in learning new things. Thus, we always can't manage our academic stuff properly. Also, we have to find study resources from various drive links and various social media groups. RUET v20.0 will unify these things and some unique concepts like the current week's CT routine and their syllabus will be here along with our previous CT marks. Also there will be a noticeboard, which will contain any notice given by Teachers or Class Representatives.

### Languages/Frameworks:

**Front End:** Next JS, Tailwind, Typescript / JavaScript

**Back End:** Fast API/ Next JS

**Database:** MySQL / PostgreSQL
